ANALYST SUMMARY

I build reliable product systems across backend services, event-driven workflows, cloud automation, and user-facing applications. I care about clean boundaries, maintainable architecture, and engineering choices that still make sense after the first release.

SYSTEM ASSET FILES

CLASS: CONFIDENTIAL	SUBJECT: R. SEGUMA	FILE: ASSETS	STATUS: ACTIVE
---------------------	--------------------	--------------	----------------

[01]	System Asset Files
ASSET FILE / OSS-01	Maintainerd Subject maintains an open-source cloud platform for self-hostable services, designed for teams that need identity, storage, messaging, databases, jobs, observability, billing, and related infrastructure under their own control.

CODENAME

Maintainerd

FUNCTION

Self-hostable service platform with standalone modules and a planned shared control plane.

AUTH NODE

OAuth 2.0 / OpenID Connect provider and identity broker with federation, MFA, multi-tenancy, and fine-grained authorization.

CORE NODE

Planned shared control plane for tenants, services, health, topology, and service coordination.

SERVICE MAP

Runtime, database, domains, secrets, gateway, storage, messaging, jobs, observability, billing, project, and support.

MATERIALS

Go, PostgreSQL, React, Docker.

EVIDENCE

[project site](#) / [auth overview](#) / [github](#)

ASSET FILE /
ENT-02

Medlexer

Subject contributed to an integrated hospital and laboratory information system supporting operational workflows, patient result handling, laboratory automation, approvals, and healthcare data standards.

CODENAME

Medlexer

FUNCTION

Integrated HIS/LIS operations platform for healthcare environments.

COVERAGE

Clinical operations, patient results, laboratory automation, approval flows, and healthcare reporting.

PROTOCOLS

HL7 and ICD-10 support for hospital and laboratory workflows.

MATERIALS

.NET / C#, Electron, PostgreSQL.

PRODUCTION ARCHITECTURE SCHEMATICS

CLASS: CONFIDENTIAL	SUBJECT: R. SEGUMA	FILE: ARCHITECTURE	STATUS: ACTIVE
---------------------	--------------------	--------------------	----------------

[03]	Architecture Showcase
SCHEMATIC / EVENT DRIVEN	Event-driven payment and receipt processing Production-style AWS flow for receiving a payment, authorizing the request, publishing a durable receipt job, generating a PDF artifact, storing records, and keeping the whole path observable and replayable.

RELIABLE Idempotent commands, durable queues, DLQ redrive, and traceable retries.	SECURE WAF, Cognito, scoped IAM, KMS encryption, and signed receipt access.	OBSERVABLE CloudWatch alarms, X-Ray traces, correlation IDs, and audit events. CONTROLLED SCHEMATIC
---	---	---

SCHEMATIC /
MICROSERVICES

Go microservices on Kubernetes

Containerized service platform layout with Go services, internal gRPC, asynchronous RabbitMQ workflows, Redis coordination, Postgres persistence, and platform-level telemetry for production operations.

SCALABLE

Pods scale by workload, queues absorb spikes, and workers process

MAINTAINABLE

Bounded contexts keep storage, ownership, and contracts explicit.

OPERABLE

Telemetry, health checks, deploy gates, and rollback paths are

safely.

first-class.

SERVICE HISTORY

CLASS: CONFIDENTIAL	SUBJECT: R. SEGUMA	FILE: SERVICE	STATUS: ACTIVE
---------------------	--------------------	---------------	----------------

[02]	Service History
ASSIGNMENT / ACTIVE	Lead Full Stack Engineer, <u>Full Scale</u> for Lula PERIOD March 2024 - Present STATION Full Scale Philippine team supporting Lula's Foresight product. COVERAGE Backend and frontend systems across service request intake, work order creation, dispatching, multi-vendor completion flows, and external service integrations. COORDINATION Distributed collaboration across the Philippines, India, the United States, and other regions.
ASSIGNMENT / PRODUCT	Innovations, <u>Via Appia Philippines</u>

PERIOD

Sept 2023 - March 2024

ACTIVITY

Converted early product ideas into working application capabilities for client-facing systems.

FINDING

Improved integration patterns and prepared production handoff paths.

ASSIGNMENT /
CONSULTANT

Technical Consultant, Via Appia Philippines

PERIOD

March 2021 - Sept 2023

COVERAGE

Requirements, solution design, backend and frontend implementation, database work, deployment coordination, and production support.

EXPOSURE

Client-facing delivery across business-process and integration-heavy systems.

ASSIGNMENT /
JUNIOR

Junior Technical Consultant, Via Appia Philippines

PERIOD

March 2019 - March 2021

ACTIVITY

Built web applications, database designs, business-process systems, and delivery support foundations.

PROGRESSION

Expanded into broader client-facing engineering responsibilities.
